

## German Cockroach Treatment

German cockroach control is dependent on customer interaction, population level, and dispersion of the colony through previous treatment attempts.

### Before Service

- Empty all cabinets around infested area.
- Cover all open food packages.
- Empty food pantry.
- Keep kitchen table/counter clear for treatment.

### After Service

- Do not use cleaning products on treated surfaces for at least 48 hours.
- Do not put out insect traps the day after treatment.
- Be patient – allow chemicals to do their job for at least a week before retreatment.

### Retreatments

If follow-up treatment is needed or recommended, the price will be ½ of the original treatment up to 90 days.

#### *Interesting Facts:*

- *Crushed cockroaches, when applied to a wound, can help ease the sting.*
- *Cockroaches can live a month without food, but only 1 week without water*
- *A roach can live without a head, but dies after a week due to lack of water*
